DETAILED ACTION

Election/Restrictions

1. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group 1, claim(s) 1-4, 13, 14, drawn to a nucleic acid reference library.

Group 2, claim(s) 5-12, drawn to microparticles and arrays comprising polymorphic probes.

Group 3, claim(s) 15-16, drawn to a method for making a reference library.

Group 4, claim(s) 17-20, drawn to a method for determining the ration of a polymorphic subregion.

2. The inventions listed as Groups 1-4 do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

(a) The invention of group 1 does not provide a special technical feature in view of the prior art after consideration of WO 95/25538 which shows methods for cloning polymorphic restriction fragments. The fragments are generated by cleavage with a first restriction enzyme; those fragments containing a polymorphic site specific for a second restriction enzyme are enriched (see Example XI and Figures 6 and 9). The cloning of a plurality of such fragments, as indicated in the example cited, provides a library of fragments. As such, the reference appears to anticipate at least claims 1, 13, and 14. Further, it should be noted that the subject-matter of claims 13 and 14 is not novel per se: any library of restriction fragments taken from a plurality of individuals will by chance contain restriction site polymorphisms with respect to a second endonuclease.

(b) The invention of group 2 does not share a special technical feature with group 1 as the invention of group 2 includes products which are different from those in group 1. The invention of group 2 claims solid supports containing thereon nucleic acid probes while group 1 claims nucleic acid reference libraries.

Art Unit: 1634

(c) The inventions of groups 3 and 4 are methods which have unique goals and method steps and thus each have their own technical features based on these. Separate methods are not grouped together in lack of unity.

3. A telephone call was made to LeeAnn Gorthey on 7/9/04 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

4. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
